

Neural Communicator is the first of its kind for the practice.

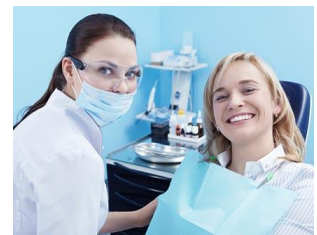

Eliminate wasted business hours by improving patient attendance

Experience has shown that Communicator's scheduled SMS and Call features can be used to drastically decrease the number of missed appointments by directly yet non-invasively reminding patients of appointments in advance.

Improve patient loyalty through direct and personal contact

Patients are happier receiving polite, communicable messages reminding them of their appointment within a timeframe they're comfortable with. You can schedule reminders to be sent the day before, or on the day of their appointment as desired.

Increase bookings with scheduled check-up reminders

Schedule quarterly, annual or customized check-up reminders for your patients. You can schedule months or even years ahead. This is an effective marketing tool for the practice and has been shown to increase bookings for regular check-up's.

So much more

Neural communicator has countless applications in the practice –

- Fax to E-mail
- Postal Service
- SMS from PC
- E-mail
- Automated calls
- **And more...**

From monthly accounts processes to day-to-day bookings, Neural Communicator has a solution for everything in the practice.
